## SUMMARY

---

Software Engineer with 10+ years of experience at industry leaders. Proficient in C++, C# and Python. Passionate about learning new technologies, developer productivity, devices, IoT, artificial intelligence, machine learning, and developing software that improves quality of life.

## SKILLS

---

- |              |                |            |                |
|--------------|----------------|------------|----------------|
| ○ C++        | ○ COM          | ○ Keras    | ○ Azure DevOps |
| ○ Modern C++ | ○ Windows      | ○ Pandas   | ○ Scrum        |
| ○ C          | ○ WinRT        | ○ NumPy    | ○ Kubernetes   |
| ○ Python     | ○ Linux        | ○ Jupyter  | ○ ASP.NET      |
| ○ C#         | ○ Spark        | ○ SQL      | ○ Azure        |
| ○ JavaScript | ○ Scala        | ○ Anaconda |                |
| ○ Java       | ○ scikit-learn | ○ Docker   |                |
| ○ PowerShell | ○ PyTorch      | ○ CMake    |                |

## EXPERIENCE

---

### Microsoft

**Redmond, WA**

*Software Engineer*

*Aug 2011 – Aug 2014, Mar 2015 – Present*

- Worked on Cognitive Services Personalizer building a compliant and scalable real-time reinforcement learning service using ASP.NET, Python, and Spark.
- Automated cross-platform and cross-architecture build using Python, CMake, Vcpkg, Docker and Azure DevOps.
- Developed open source client and other components for IoT device software updates in C, C++ and CMake.
- Worked on MSN News App building engaging desktop and iOS and Android mobile applications using JavaScript, C#, Objective-C, and Java.
- C++, COM and WinRT development of core operating system and browser components.
- Worked on Windows Phone NFC payments and Received Windows Phone Excellence in Execution Award.

### Amazon

**Seattle, WA**

*Software Engineer*

*Aug 2014 – Feb 2015*

- Developed Python tools for testing service reliability and performance during server outages.
- Worked on data ingestion and aggregation pipeline.

## EDUCATION

---

### Georgia Institute of Technology

*MS in Computer Science*

**Atlanta, GA**

*Aug 2019 - May 2023 (expected graduation date)*

- Specialization in machine learning.
- CSE 6250 - Big Data for Health Informatics
  - Final project used PySpark to process and aggregate clinical note data for patients from MIMIC III dataset. Used PyTorch to implement and train a model built with custom RNN containing GRU cells and compare with a model created using transfer learning with pre-trained BERT model that was trained on domain specific corpus (Clinical BERT). Models were trained and evaluated on predicting patient mortality from clinical note data.
  - Used Pandas, Spark, Spark GraphX, Scala, and PySpark for processing and analyzing healthcare data.
  - Used scikit-learn to train and evaluate various machine learning models.
  - Used PyTorch to implement, train, and evaluate RNNs and CNNs for timeseries healthcare data.
- CS 7638 - Artificial Intelligence for Robotics
  - Implemented Kalman filter and Particle filter for localization in Python.

### University of Arizona

*BS in Mathematics and Computer Science*

**Tucson, AZ**

*Aug 2006 - May 2011*

- Summa Cum Laude (GPA: 3.94/4.0).
- Undergraduate TA in math and computer science.
- Undergraduate Research Team Lead.
  - *Terahertz Thermal Emission Optimization with Genetic Algorithm.*
  - <https://www.math.arizona.edu/~brio/VIGRE/THzEmission.html>

## VOLUNTEERING

---

### Bellevue College

*Mentor and Guest Speaker*

**Bellevue, WA**

*Aug 2017 - Present*

- Mentored Bellevue College students for undergraduate research project for text annotation of images.
- Mentored Bellevue College students for summer game design program.
- Mentored Bellevue College students for undergraduate research in reinforcement learning. Helped Students build DQN and Gym environment to control Sphero robot in a physical environment.
- Bellevue College STEM Advisory Board member.
- Bellevue College 2019 Global Game Jam judge.
